

# 10TH FUNCTIONAL CHOLESTEATOMA SURGERY COURSE

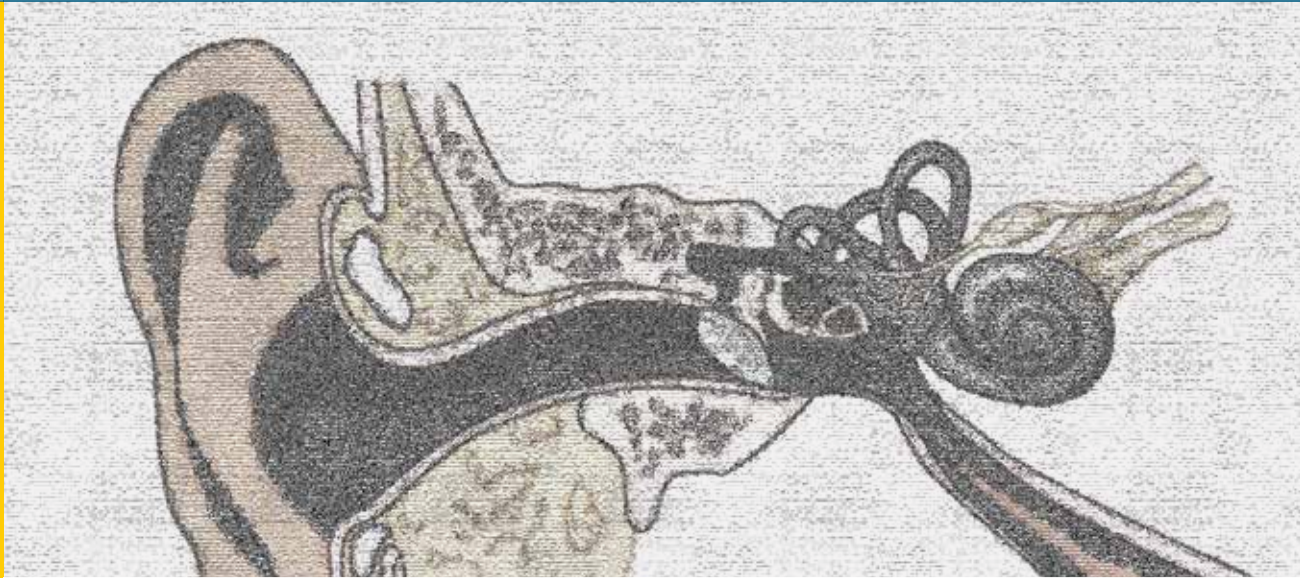

## VENUE

Anatomy Department  
St Georges Hospital  
Blackshaw Rd  
Tooting  
London  
SW17 0QT

## DATE

Tue 17<sup>th</sup> November  
Wed 18<sup>th</sup> November  
2020

EARLY BOOKING ADVISED

## Laser Techniques in Cholesteatoma Surgery

This hands-on surgical training course is designed to provide delegates who have experience of cholesteatoma surgery to enhance their surgery with a fibre-guided laser.

All delegates have the opportunity to undertake surgical dissections with state-of-the-art otological drills, micro-dissection instruments, microscopes and lasers.

All delegates receive tuition on general laser safety, safe use of the laser in the temporal bone, laser dissection techniques, dissection to identify and safeguard the facial nerve, and dissection techniques to facilitate optimal use of the laser in cholesteatoma surgery.

Delegates will learn to safely remove cholesteatoma with the laser. They will learn how to remove cholesteatoma when necessary through joint use of an otological mirror and the laser. They will also learn how to remove disease from the intact ossicular chain, whilst preserving the ossicles even when they are invested in cholesteatoma.

## FACULTY

John Hamilton

Andy Beynon Phillips

Rob Harris

James Mitchell
